Year & Semester : III Year / VI Semester

CS6611-MOBILE APPLICATION DEVELOPMENT LAB

ANNA UNIVERSITY: CHENNAI

REGULATION – 2013

SYLLABUS

CS6611 MOBILE APPLICATION DEVELOPMENT LABORATORY

OBJECTIVES:

The student should be made to:

- Know the components and structure of mobile application development frameworks for Android and windows OS based mobiles.
- Understand how to work with various mobile application development frameworks. • Learn the basic and important design concepts and issues of development of mobile applications.
- Understand the capabilities and limitations of mobile devices.

LIST OF EXPERIMENTS:

- 1 .Develop an application that uses GUI components, Font and Colours
2. Develop an application that uses Layout Managers and event listeners.
3. Develop a native calculator application.
4. Write an application that draws basic graphical primitives on the screen.
5. Develop an application that makes use of database.
6. Develop an application that makes use of RSS Feed.
7. Implement an application that implements Multi threading
8. Develop a native application that uses GPS location information.
9. Implement an application that writes data to the SD card.
10. Implement an application that creates an alert upon receiving a message.
11. Write a mobile application that creates alarm clock

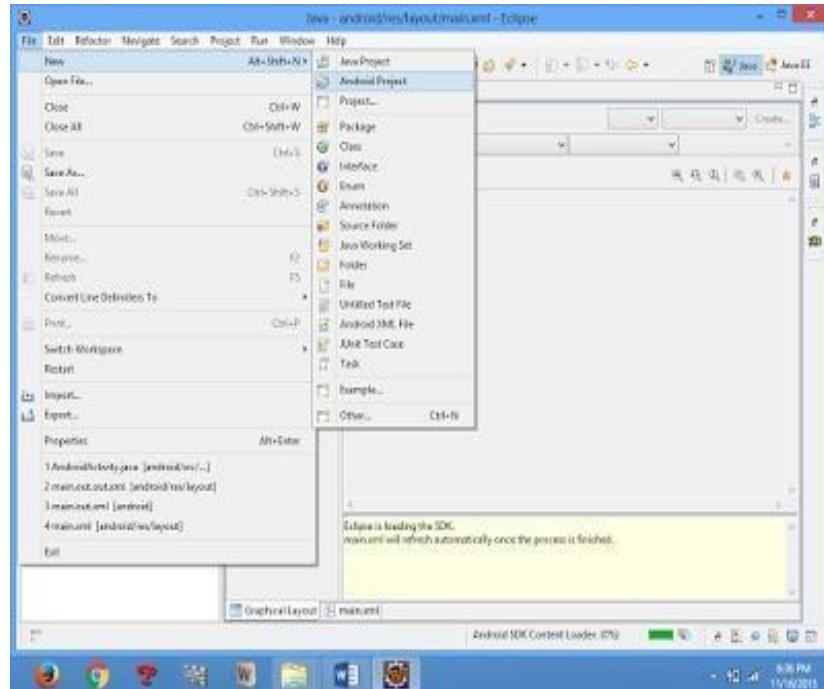

TOTAL: 45 PERIODS

INDEX

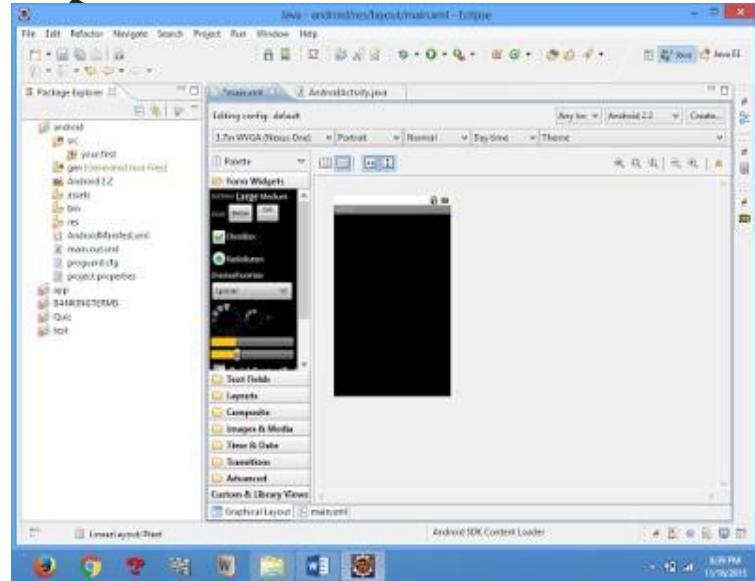

S.NO	DATE	EXPERIMENTS	SIGNATURE OF THE STAFF	REMARKS
1		Develop an application that uses GUI components, Font and Colors		
2		Develop an application that uses Layout Managers and event listeners.		
3		Develop a native calculator application.		
4		Write an application that draws basic graphical primitives on the screen.		
5		Develop an application that makes use of database.		
6		Develop an application that makes use of RSS Feed.		
7		Implement an application that implements Multi-threading		
8		Develop a native application that uses GPS location information.		
9		Implement an application that writes data to the SD card.		
10		Implement an application that creates an alert upon receiving a message.		
11		Write a mobile application that creates alarm clock		

Ex.No: 1**Date :****Develop an application that uses GUI components, Font and Colours****Simple application to change font size and color of text view**

- 1) Open eclipse or android studio and select new android project

- 2) Give project name and select next
- 3) Choose the android version. Choose the lowest android version (Android 2.2) and select next
- 4) Enter the package name. Package name must be two word separated by comma and click finish
- 5) Go to package explorer in the left hand side. Select our project.
- 6) Go to res folder and select layout. Double click the main.xml file
- 7) Now you can see the Graphics layout window.

- 8) Click the main.xml file and type the code below

Code:

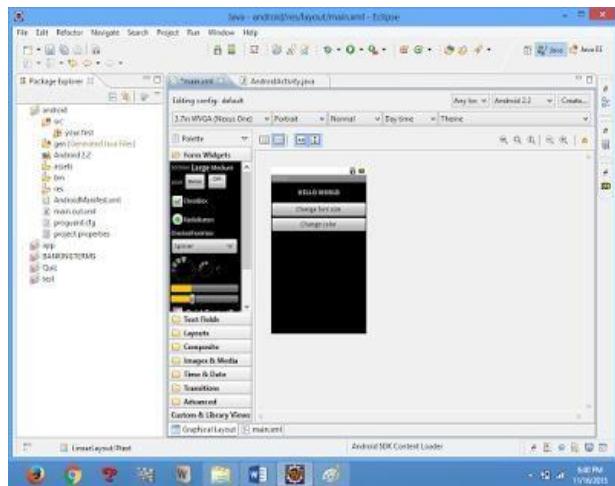

```
<?xml version="1.0" encoding="utf-8"?>
<LinearLayout
    xmlns:android="http://schemas.android.com/apk/res/android"
    android:layout_width="fill_parent"    android:layout_height="fill_parent"
    android:orientation="vertical" >
    <TextView
        android:id="@+id/textView1"
        android:layout_width="match_parent"
        android:layout_height="wrap_content"
        android:layout_margin="20sp"
        android:gravity="center"
        android:text="HELLO WORLD"
        android:textSize="20sp"
        android:textStyle="bold" />
    <Button
        android:id="@+id/button1"
        android:layout_width="match_parent"
        android:layout_height="wrap_content"
```

```

    android:gravity="center"
    android:text="Change font size"
    android:textSize="20sp" />
<Button
    android:id="@+id/button2"
    android:layout_width="match_parent"
    android:layout_height="wrap_content"
    android:gravity="center"
    android:text="Change color"
    android:textSize="20sp" />
<Button
    android:id="@+id/button3"
    android:layout_width="match_parent"
    android:layout_height="wrap_content"
    android:gravity="center"
    android:text="Change font"
    android:textSize="20sp" />
</LinearLayout>

```

9) Again click the graphics layout tab and screen layout is look like below

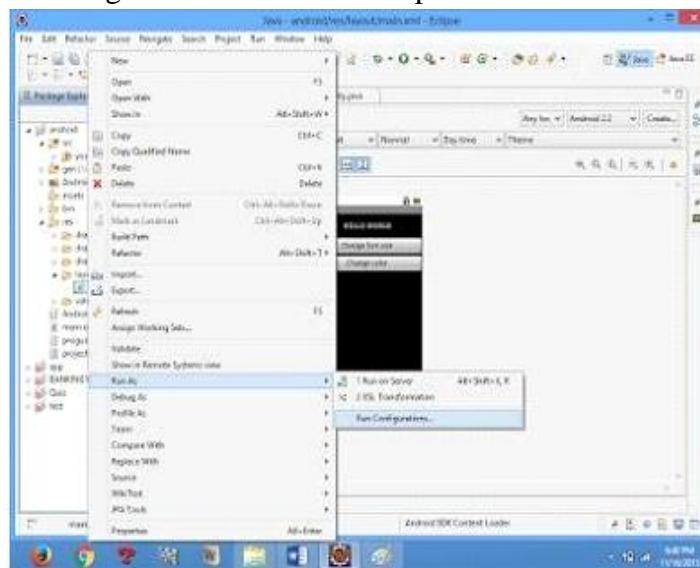

10) Go to project explorer and select **SRC** folder. Now select mainactivity.java file and type the following code.

PROGRAM

```
import android.R; import
android.app.Activity; import
android.graphics.Color; import
android.graphics.Typeface; import
android.os.Bundle; import
android.view.View; import
android.widget.Button; import
android.widget.TextView;
public class AndroidActivity extends Activity
{    float font =24;    int i=1;
    @Override    public void
onCreate(Bundle savedInstanceState) {
super.onCreate(savedInstanceState);
setContentView(R.layout.main);
    final TextView t1=(TextView)
findViewById(R.id.textView1);    Button
b1 = (Button) findViewById(R.id.button1);
    b1.setOnClickListener(new
View.OnClickListener() {
        public void onClick(View view) {
            t1.setTextSize(font);
font=font+4;            if(font==40)
font=20;
        }
    });
    Button b2 = (Button)
findViewById(R.id.button2);
    b2.setOnClickListener(new
View.OnClickListener() {
```

```
public void onClick(View view) {  
    switch(i){  
        case 1:  
            t1.setTextColor(Color.parseColor("#0000FF"));  
            break;  
        case 2:  
            t1.setTextColor(Color.parseColor("#00FF00"));  
            break;  
        case 3:  
            t1.setTextColor(Color.parseColor("#FF0000"));  
            break;  
        case 4:  
            t1.setTextColor(Color.parseColor("#800000"));  
            break;  
    }  
    i++;  
    if(i==5)  
        i=1;  
    }  
});  
}  
}
```

- 11) Now go to main.xml and right click .select run as option and select run configuration

- 12) Android output is present in the android emulator as shown in below.

Ex.No : 2**Date :**

**DEVELOP AN APPLICATION THAT USES LAYOUT
MANAGERS AND EVENT LISTENERS**

- 1) Open eclipse or android studio and select new android project
- 2) Give project name and select next
- 3) Choose the android version. Choose the lowest android version (Android 2.2) and select next
- 4) Enter the package name. Package name must be two word separated by comma and click finish
- 5) Go to package explorer in the left hand side. select our project.
- 6) Go to res folder and select layout. Double click the main.xml file. Add the code below

<RelativeLayout

```
    xmlns:android="http://schemas.android.com/apk/res/android"
    android:id="@+id/relativeLayout1"        android:layout_width="fill_parent"
    android:layout_height="fill_parent" >
```

<LinearLayout

```
    android:id="@+id/linearLayout1"
    android:layout_width="wrap_content"
    android:layout_height="wrap_content"
    android:layout_alignParentLeft="true"
    android:layout_alignParentRight="true"
    android:layout_alignParentTop="true" >
```

<TextView

```
    android:layout_width="wrap_content"
    android:layout_height="wrap_content"
    android:layout_gravity="center"
    android:text="ADDITION"
    android:textSize="20dp" >
```

```
</TextView>
</LinearLayout><LinearLayout
    android:id="@+id/linearLayout2"
    android:layout_width="wrap_content"
    android:layout_height="wrap_content"
    android:layout_alignParentLeft="true"
    android:layout_alignParentRight="true"
    android:layout_below="@+id/linearLayout1" >
    <TextView
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:text="ENTER NO 1" >
    </TextView><EditText
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:layout_weight="0.20"
        android:id="@+id/edittext1"
        android:inputType="number">
    </EditText>
</LinearLayout><LinearLayout
    android:id="@+id/linearLayout3"
    android:layout_width="wrap_content"
    android:layout_height="wrap_content"
    android:layout_alignParentLeft="true"
    android:layout_alignParentRight="true"
    android:layout_below="@+id/linearLayout2" >
    <TextView
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:text="ENTER NO 2" >
    </TextView><EditText
        android:layout_width="wrap_content"
```

```
    android:layout_height="wrap_content"
    android:layout_weight="0.20"
    android:id="@+id/edittext2"
    android:inputType="number">
</EditText>
</LinearLayout><LinearLayout
    android:id="@+id/linearLayout4"
    android:layout_width="wrap_content"
    android:layout_height="wrap_content"
    android:layout_alignParentLeft="true"
    android:layout_alignParentRight="true"
    android:layout_below="@+id/linearLayout3" >

    <Button
        android:layout_width="wrap_content"
        android:id="@+id/button1"
        android:layout_height="wrap_content"
        android:text="Addition"
        android:layout_weight="0.50" />
    <Button
        android:layout_width="wrap_content"
        android:id="@+id/button3"
        android:layout_height="wrap_content"
        android:text="subtraction"
        android:layout_weight="0.50" />
    <Button
        android:layout_width="wrap_content"
        android:id="@+id/button2"
        android:layout_height="wrap_content"
        android:text="CLEAR"
        android:layout_weight="0.50" />
</LinearLayout>
```

```

<View
    android:layout_height="2px"
    android:layout_width="fill_parent"
    android:layout_below="@+id/linearLayout4"
    android:background="#DDFFDD"/>
</RelativeLayout>

```

7) Now select mainactivity.java file and type the following code.

```

package layout.ne;
import android.app.Activity;
import android.os.Bundle;
import android.view.View;
import
android.view.View.OnClickListener;
import android.widget.Button; import
android.widget.EditText; import
android.widget.Toast;

public class LAYOUTActivity
extends Activity {
    /** Called when the activity is first created. */ EditText
txtData1,txtData2; float num1,num2,result1,result2;
@Override
public void onCreate(Bundle
savedInstanceState) {
super.onCreate(savedInstanceState);
}

setContentView(R.layout.main);

Button add = (Button)
findViewById(R.id.button1);
add.setOnClickListener(new

```

```
OnClickListener() {      public
void onClick(View v) {
try
{
txtData1 = (EditText)
findViewById(R.id.edittext1);
txtData2 = (EditText)
findViewById(R.id.edittext2);
num1 =
Float.parseFloat(txtData1.getTe
xt().toString());           num2
=
Float.parseFloat(txtData2.getTe
xt().toString());
result1=num1+num2;

Toast.makeText(getApplicationContext(),"ANSWER:"+result1,Toast.LENGTH_SHORT).show();
}
catch(Exception e)
{
Toast.makeText(getApplicationContext(), e.getMessage(),
Toast.LENGTH_SHORT).show();
}
}
);

Button sub = (Button) findViewById(R.id.button3);
sub.setOnClickListener(new OnClickListener() {

public void onClick(View v) {
try
{
```

```
txtData1 = (EditText) findViewById(R.id.edittext1);
txtData2 = (EditText) findViewById(R.id.edittext2);      num1 =
Float.parseFloat(txtData1.getText().toString());      num2 =
Float.parseFloat(txtData2.getText().toString());
result2=num1-num2;

Toast.makeText(getApplicationContext(),"ANSWER:"+result2,Toast.LENGTH_SHORT).show();
}

catch(Exception e)
{
    Toast.makeText(getApplicationContext(), e.getMessage(),
    Toast.LENGTH_SHORT).show();
}
});

Button clear = (Button) findViewById(R.id.button2);
clear.setOnClickListener(new OnClickListener() {

    public void onClick(View v) {
try
{
    txtData1.setText("");
    txtData2.setText("");
}
catch(Exception e)
{
    Toast.makeText(getApplicationContext(), e.getMessage(),
    Toast.LENGTH_SHORT).show();
}
});

}}
```

- 8) Now go to main.xml and right click .select run as option and select run configuration
- 9) Android output is present in the android emulator as shown in below.

Ex.No : 3

Date :

DEVELOP A NATIVE CALCULATOR APPLICATION

- 1) Open eclipse or android studio and select new android project
- 2) Give project name and select next
- 3) Choose the android version. Choose the lowest android version(Android 2.2) and select next
- 4) Enter the package name. package name must be two word separated by comma and click finish
- 5) Go to package explorer in the left hand side. select our project.
- 6) Go to res folder and select layout. Double click the main.xml file. Add the code below

Main.xml coding

```
<?xml version="1.0" encoding="utf-8"?>
<LinearLayout
    xmlns:android="http://schemas.android.com/apk/res/android"
    android:orientation="vertical"
    android:layout_width="fill_parent"
    android:layout_height="fill_parent">
    <LinearLayout android:layout_width="match_parent"
        android:layout_height="wrap_content"

    android:layout_height="40dp"/>n      <Button
    android:id="@+id	btnModify"
    android:text="@string/modify"
    android:layout_x="30dp"
    android:layout_y="250dp"
    android:layout_width="130dp"
    android:layout_height="40dp"/>n<Button
    android:id="@+id	btnView"
    android:text="@string/view"
    android:layout_x="160dp"
    android:layout_y="250dp"
    android:layout_width="130dp"
    android:layout_height="40dp"/>n<Button
    android:id="@+id	btnViewAll"
    android:text="@string/view_all"
    android:layout_x="85dp"
    android:layout_y="300dp"
    android:layout_width="150dp"
    android:layout_height="40dp"/>n

```

</AbsoluteLayout>

7) Go to values folder and select string.xml file. Replace the code below

```
<?xml version="1.0" encoding="utf-8"?>
<resources>

    <string name="app_name">Employee detail1</string>
    <string name="hello">Hello World, Employee detail Activity!</string><string
        name="title">Employee Details</string>
    <string name="empid">Enter Employee ID: </string>
```

```

<string name="name">Enter Name: </string>
<string name="salary">Enter salary: </string>
<string name="add">Add Employee</string>
<string name="delete">Delete Employee</string>
<string name="modify">Modify Employee</string>
<string name="view">View Employee</string>
<string name="view_all">View All Employee</string>
</resources>

```

- 8) Now select mainactivity.java file and type the following code.In my coding maniactivity name is EmployeeDetailActivity.

```

package employee.detail;
//import android.R; import android.app.Activity; import android.app.AlertDialog;
import android.content.Context; import android.database.Cursor;
import
android.database.sqlite.SQLiteDatabase;
import android.os.Bundle; import
android.view.View;
import
android.view.View.OnClickListener;
import android.widget.Button; import
android.widget.EditText;

public class EmployeeDetailActivity extends Activity implements OnClickListener {
EditText editEmpid,editName,editSalary;
Button btnAdd,btnDelete,btnModify,btnView,btnViewAll;
SQLiteDatabase db;
/** Called when the activity is first created. */
@Override
public void onCreate(Bundle savedInstanceState)
{

```

```
super.onCreate(savedInstanceState);
setContentView(R.layout.main);
editEmpid=(EditText)findViewById(R.id.editEmpid);
editName=(EditText)findViewById(R.id.editName);
editSalary=(EditText)findViewById(R.id.editSalary);

editsalary.setText(c.getString(2));
}
else
{
```

```
showMessage("Error", "Invalid Employee id");
clearText();
}
}
if(view==btnViewAll)
{
Cursor c=db.rawQuery("SELECT * FROM employee", null);
if(c.getCount()==0)
{
showMessage("Error", "No records found");           return;
}
StringBuffer buffer=new StringBuffer();           while(c.moveToNext())
{
buffer.append("Employee id: "+c.getString(0)+"\n");
buffer.append("Name: "+c.getString(1)+"\n");
buffer.append("salary: "+c.getString(2)+"\n\n");
}
showMessage("Employee details Details", buffer.toString());
}
}

public void showMessage(String title,String message)
{
Builder builder=new Builder(this);
builder.setCancelable(true);      builder.setTitle(title);
builder.setMessage(message);
builder.show();
}

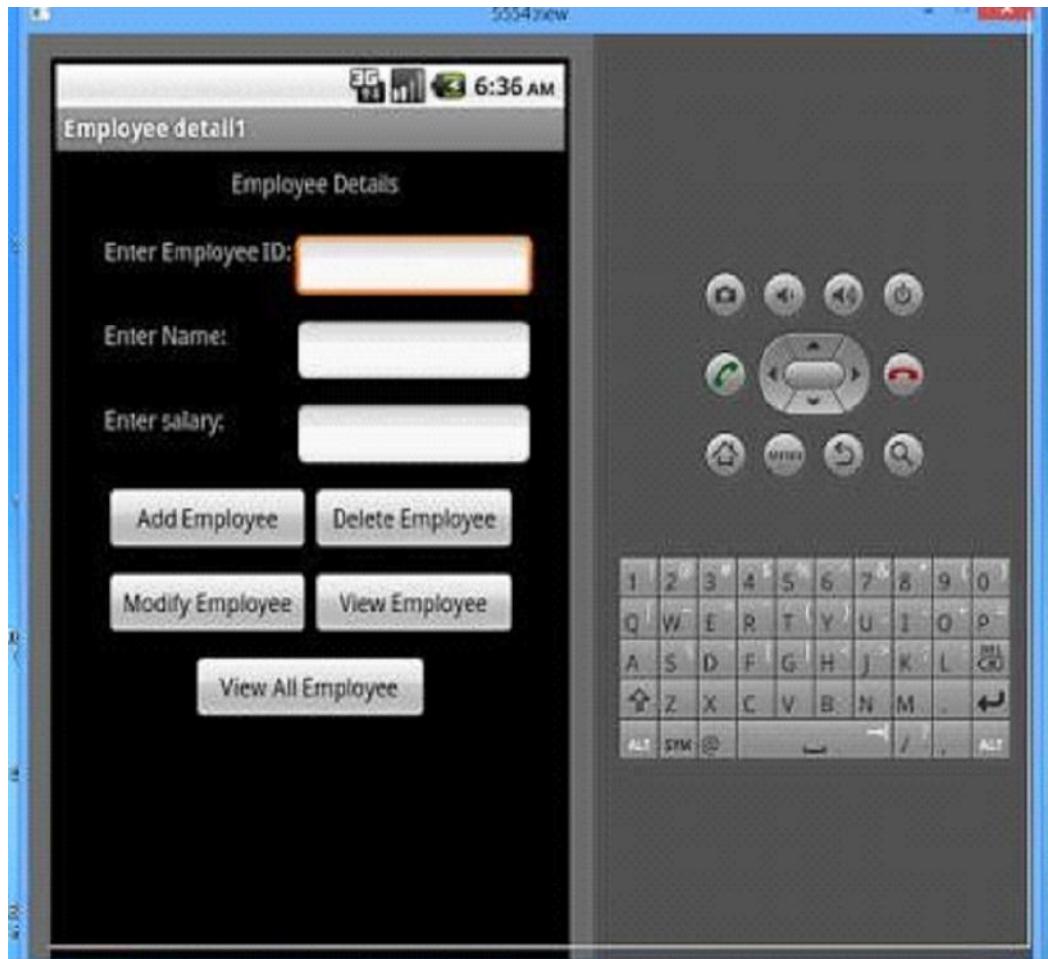

public void clearText()
{
editEmpid.setText("");      editText.setText("");
editSalary.setText("");
editEmpid.requestFocus();
}
```

}

}

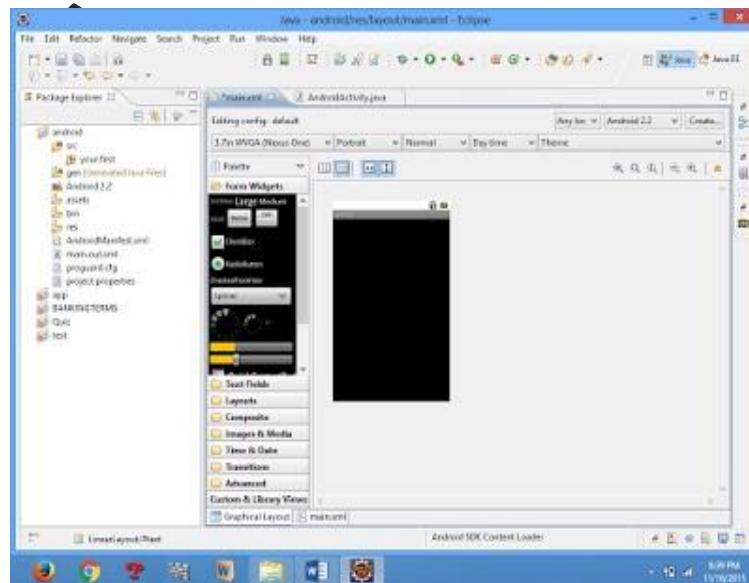

7) Now go to main.xml and right click .select run as option and select run configuration

8) Android output is present in the android emulator as shown in below.

Ex. No : 6**Date :****DEVELOP AN APPLICATION THAT MAKES USE OF RSS FEED**

- 1) Open eclipse or android studio and select new android project
- 2) Give project name and select next
- 3) Choose the android version. Choose the lowest android version (Android 2.2) and select next
- 4) Enter the package name. Package name must be two word separated by comma and click finish
- 5) Go to package explorer in the left hand side. Select our project.
- 6) Go to res folder and select layout. Double click the main.xml file
- 7) Now you can see the Graphics layout window.

- 8) Click the main.xml file and type the code below

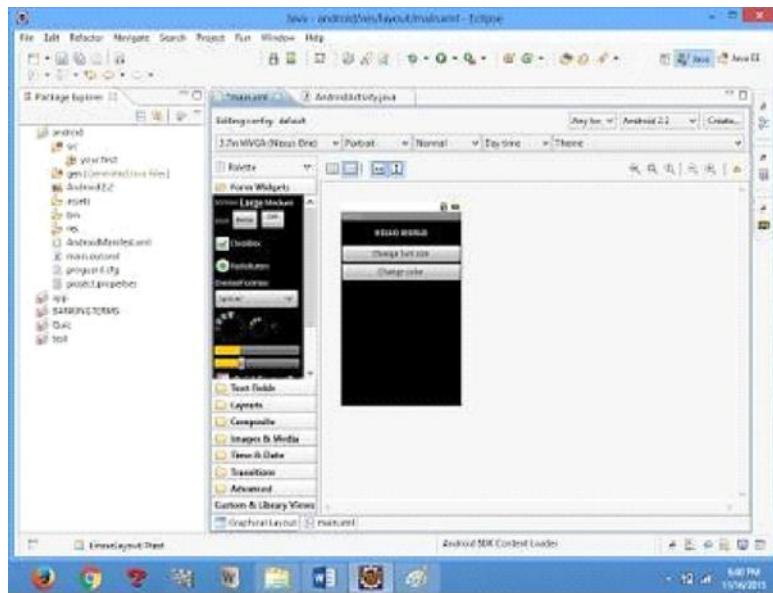

Code:

```
<?xml version='1.0' encoding='utf-8'?>
<LinearLayout
    xmlns:android="http://schemas.android.com/apk/res/android"
```

```
    android:layout_width="fill_parent"    android:layout_height="fill_parent"
    android:orientation="vertical" >
    <TextView
        android:id="@+id/textView1"
        android:layout_width="match_parent"
        android:layout_height="wrap_content"
        android:layout_margin="20sp"
        android:gravity="center"
        android:text="HELLO WORLD"
        android:textSize="20sp"
        android:textStyle="bold" />
    <Button
        android:id="@+id/button1"
        android:layout_width="match_parent"
        android:layout_height="wrap_content"
        android:gravity="center"
        android:text="Change font size"
        android:textSize="20sp" />
    <Button
        android:id="@+id/button2"
        android:layout_width="match_parent"
        android:layout_height="wrap_content"
        android:gravity="center"
        android:text="Change color"
        android:textSize="20sp" />
    <Button
        android:id="@+id/button3"
        android:layout_width="match_parent"
        android:layout_height="wrap_content"
        android:gravity="center"
        android:text="Change font"
        android:textSize="20sp" />
```

</LinearLayout>

9) Again click the graphics layout tab and screen layout is look like below

10) Go to project explorer and select *SRC* folder. Now select mainactivity.java file and type the following code.

PROGRAM

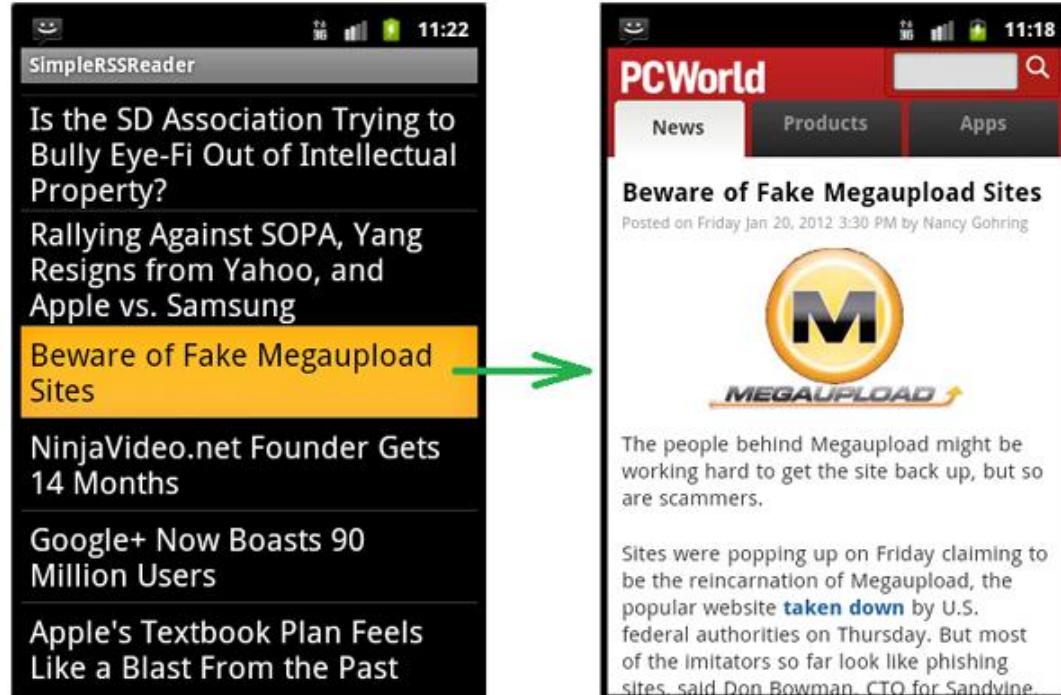

```
import android.R; import
android.app.Activity; import
android.graphics.Color; import
android.graphics.Typeface; import
android.os.Bundle; import
android.view.View; import
android.widget.Button; import
android.widget.TextView;

public class AndroidActivity extends Activity {    float
font =24;    int i=1;

@Override    public void onCreate(Bundle
savedInstanceState) {
super.onCreate(savedInstanceState);      setContentView(R.layout.main);
```

```
final TextView t1=(TextView) findViewById(R.id.textView1);    Button b1
= (Button) findViewById(R.id.button1);
b1.setOnClickListener(new View.OnClickListener() {
    public void onClick(View view) {
        t1.setTextSize(font);
        font=font+4;      if(font==40)
        font=20;
    }
});
Button b2 = (Button) findViewById(R.id.button2);
b2.setOnClickListener(new View.OnClickListener() {
    public void onClick(View view) {
switch(i)
{
    case 1:
        t1.setTextColor(Color.parseColor("#0000FF"));
break;    case 2:
        t1.setTextColor(Color.parseColor("#00FF00"));
break;    case 3:
        t1.setTextColor(Color.parseColor("#FF0000"));
break;    case 4:
        t1.setTextColor(Color.parseColor("#800000"));
break;
    i++;
}
if(i==5)
i=1;
}
});
}
}
```

- 8) Now go to main.xml and right click .select run as option and select run configuration

Ex. No: 7**Date :**

IMPLEMENT AN APPLICATION THAT IMPLEMENTS MULTI THREADING

- 1) Open eclipse or android studio and select new android project
- 2) Give project name and select next
- 3) Choose the android version. Choose the lowest android version (Android 2.2) and select next
- 4) Enter the package name. Package name must be two word separated by comma and click finish
- 5) Go to package explorer in the left hand side. Select our project.
- 6) Go to res folder and select layout. Double click the main.xml file. Add the code below

```
<?xml version="1.0" encoding="utf-8"?>
<LinearLayout
    xmlns:android="http://schemas.android.com/apk/res/android"
    android:layout_width="match_parent"
    android:layout_height="match_parent"    android:orientation="vertical"
    android:id="@+id/info" >
    <Button
        android:id="@+id/button1"
        android:layout_width="match_parent"
        android:layout_height="wrap_content"
        android:onClick="fetchData"
        android:text="Start MULTITHREAD" />
    <TextView
        android:id="@+id/textView1"
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:text="Main thread" />
</LinearLayout>
```

7) Now select mainactivity.java file and type the following code.

```
package multi.threading;  
//import your.first.R; import  
android.app.Activity; import  
android.os.Bundle; import  
android.os.Handler; import  
android.view.View; import  
android.widget.TextView;  
  
public class MultiThreadingActivity extends Activity  
{ private TextView tvOutput; private static  
final int t1 = 1; private static final int t2 = 2;  
private static final int t3 = 3;  
@Override  
public void onCreate(Bundle savedInstanceState) {  
super.onCreate(savedInstanceState);  
setContentView(R.layout.main);  
tvOutput = (TextView) findViewById(R.id.textView1);  
}  
public void fetchData(View v) {  
tvOutput.setText("Main thread");  
thread1.start();  
thread2.start();  
thread3.start();  
}  
  
Thread thread1 = new Thread(new Runnable() {  
@Override public void  
run() { for (int i = 0; i  
< 5; i++) { try {
```

```
    Thread.sleep(1000); } catch
    (InterruptedException e) {
        e.printStackTrace();
    }
    handler.sendMessage(t1);
}

});

Thread thread2 = new Thread(new Runnable() {

    @Override public void
    run() { for (int i = 0; i
        < 5; i++) { try {
            Thread.sleep(1000); } catch
            (InterruptedException e) {
                e.printStackTrace();
            }
            handler.sendMessage(t2);
        }
    }

});

Thread thread3 = new Thread(new Runnable() {

    @Override public void
    run() { for (int i = 0; i
        < 5; i++) { try {
            Thread.sleep(1000);
        } catch (InterruptedException e) {
            e.printStackTrace();
        }
        handler.sendMessage(t3);
    }

});
```

```
}

}

});

Handler handler = new Handler() {
    public void handleMessage(android.os.Message msg) {
        if(msg.what == t1) {
            tvOutput.append("\nIn thread 1");
        }
        if(msg.what == t2) {
            tvOutput.append("\nIn thread 2");
        }
        if(msg.what == t3) {
            tvOutput.append("\nIn thread 3");
        }
    }
};
```

- 8) Now go to main.xml and right click .select run as option and select run configuration
- 9) Android output is present in the android emulator as shown in below.

Ex.No : 8**Date :**

DEVELOP A NATIVE APPLICATION THAT USES GPS

LOCATION INFORMATION

- 1) Open eclipse or android studio and select new android project
- 2) Give project name and select next
- 3) Choose the android version. Choose the lowest android version (Android 2.2) and select next
- 4) Enter the package name. package name must be two word separated by comma and click finish
- 5) Go to package explorer in the left hand side. select our project.
- 6) Go to res folder and select layout. Double click the main.xml file. Add the code below

```
<?xml version="1.0" encoding="utf-8"?>
<RelativeLayout
    xmlns:android="http://schemas.android.com/apk/res/android"
    android:id="@+id/relativeLayout1"
    android:layout_width="match_parent"
    android:layout_height="match_parent" >
    <Button
        android:id="@+id/show_Location"
        ""
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:text="Show_Location"
        android:layout_centerVertical="true"
        />
```

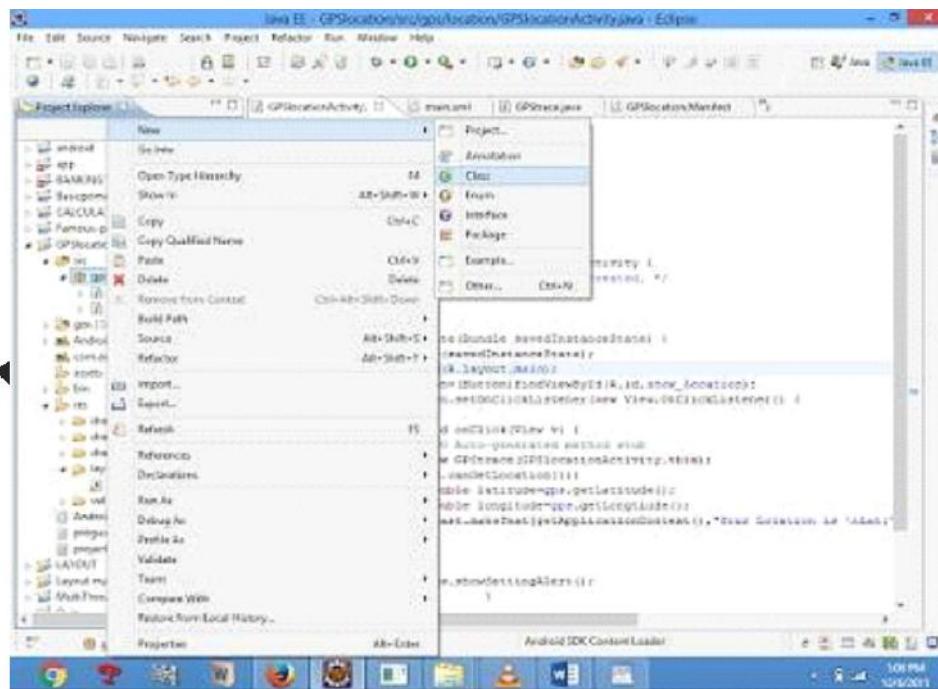

```
    android:layout_centerHorizontal="true"  
    />  
</RelativeLayout>
```

- 7) Now select mainactivity.java file and type the following code. In my coding man activity name is GPSlocation Activity. Package gps.location;

```
//import android.R;  
import  
    android.app.Activity;  
import  
    android.os.Bundle;  
import  
    android.view.View;  
import  
    android.widget.Button;  
import  
    android.widget.Toast;  
;  
  
public class GPSlocationActivity extends Activity {  
    /** Called when the activity is first created. */  
    Button btnShowLocation;  
    GPStrace gps;  
    @Override  
    public void onCreate(Bundle savedInstanceState) {  
        super.onCreate(savedInstanceState);  
        setContentView(R.layout.main);  
        btnShowLocation=(Button)findViewById(R.id.show_Location);  
        btnShowLocation.setOnClickListener(new View.OnClickListener() {  
            @Override  
            public void onClick(View v) {
```

```
// TODO Auto-generated method stub
gps=new GPStrace(GPSlocationActivity.this);
if(gps.canGetLocation()){
    double latitude=gps.getLatitude();
    double longitude=gps.getLongitude();
    Toast.makeText(getApplicationContext(),"Your Location is
    \nLat:"+latitude+"\nLong:"+longitude,Toast.LENGTH_LONG).show();
}
else
{
    gps.showSettingAlert();
}
}
});
```

- 8) Go to src folder and Right Click on your package folder and choose new class and give the class names as GPS trace

- 9) Select the GPStrace.java file and paste the following code.

```
Package gps.location;
import android.app.AlertDialog;
import android.app.Service;
import android.content.Context;
import
android.content.DialogInterface;
import android.content.Intent;
import android.location.Location;
import
android.location.LocationListener
; import
android.location.LocationManager
r; import android.os.Bundle;
import android.os.IBinder; import

}
```

10) Go to manifest.xml file and add the code below

```
<uses-permission  
android:name="android.permission.ACCESS_FINE_LOCATION"/>
```

```
<uses-permission  
    android:name="android.permission.INTERNET"/>
```

11) Now go to main.xml and right click .select run as option and select run configuration

12) Android output is present in the android emulator as shown in below.

Ex.No : 9**Date :**

IMPLEMENT AN APPLICATION THAT WRITES DATA TO THE SD CARD

- 1) Open eclipse or android studio and select new android project
- 2) Give project name and select next
- 3) Choose the android version. Choose the lowest android version (Android 2.2) and select next
- 4) Enter the package name. Package name must be two word separated by comma and click finish
- 5) Go to package explorer in the left hand side. Select our project.
- 6) Go to res folder and select layout. Double click the main.xml file. Add the code below

```
<?xml version="1.0" encoding="utf-8"?>
<LinearLayout
    xmlns:android="http://schemas.android.com/apk/res/android"
    android:layout_width="fill_parent"
    android:layout_height="fill_parent"
    android:background="#ff0000ff"    android:orientation="vertical" >
    <EditText
        android:id="@+id/editText1"
        android:layout_width="match_parent"
        android:layout_height="wrap_content" >
        <requestFocus />
    </EditText>
    <Button
        android:id="@+id/button1"
        android:layout_width="match_parent"
        android:layout_height="wrap_content"
        android:text="SAVE DATA" />
    <Button
```

```
    android:id="@+id/button2"  
    android:layout_width="match_parent"  
    android:layout_height="wrap_content"  
    android:text="SHOW DATA" />  
  
    <TextView  
        android:id="@+id/textView1"  
        android:layout_width="wrap_content"  
        android:layout_height="wrap_content"  
    />  
    </LinearLayout>
```

7) Now select *mainactivity.java* file and type the following code.

```
package save.sd;  
import java.io.File; import  
java.io.FileInputStream; import  
java.io.FileNotFoundException;  
import java.io.FileOutputStream;  
import java.io.IOException; import  
java.io.InputStreamReader; import  
java.io.OutputStreamWriter; import  
android.app.Activity; import  
android.os.Bundle; import  
android.os.Environment; import  
android.view.View; import  
android.widget.Button; import  
android.widget.EditText; import  
android.widget.TextView; import  
android.widget.Toast;  
  
public class SavedatasdcardActivity extends Activity {  
    /** Called when the activity is first created. */  
    Button save,load;  
    EditText message;  
    TextView t1;
```

```
String Message1;  
@Override  
public void onCreate(Bundle savedInstanceState) {  
super.onCreate(savedInstanceState);  
setContentView(R.layout.main);    save=(Button)  
findViewById(R.id.button1);    load=(Button)  
findViewById(R.id.button2);    message=(EditText)  
findViewById(R.id.editText1);    t1=(TextView)  
findViewById(R.id.textView1);  
save.setOnClickListener(new View.OnClickListener(){  
public void onClick(View v){  
//Get message from user store in message1 variable  
Message1 =message.getText().toString();          try{  
//Create a new folder called MyDirectory in SDCard  
File sdcard=Environment.getExternalStorageDirectory();  
File directory=new File(sdcard.getAbsolutePath() + "/MyDirectory");  
directory.mkdirs();  
//Create a new file name myfile.txt inside MyDirectory  
File file=new File(directory,"myfile.txt");  
//Create File OutputStream to read the file  
FileOutputStream fou=new FileOutputStream(file);  
OutputStreamWriter osw=new OutputStreamWriter(fou);  
try{  
//write a user data to file  
osw.append(Message1);  
osw.flush();  
osw.close();  
Toast.makeText(getApplicationContext(),"Data  
Saved",Toast.LENGTH_LONG).show();  
  
}catch(IOException e){  
e.printStackTrace();
```

```
}

}catch (FileNotFoundException e){
e.printStackTrace();
}

});

load.setOnClickListener(new View.OnClickListener(){
public void onClick(View v){
try{
File sdcard=Environment.getExternalStorageDirectory();
File directory=new File(sdcard.getAbsolutePath()+'/MyDirectory');
File file=new File(directory,"textfile.txt");
FileInputStream fis=new FileInputStream(file);
InputStreamReader isr=new InputStreamReader(fis);
char[] data=new char[100];
String final_data="";
int size;
try{
while((size=isr.read(data))>0)
{
//read a data from file
String read_data=String.valueOf(data,0,size);
final_data+=read_data;
data=new char[100];
}
//display the data in output

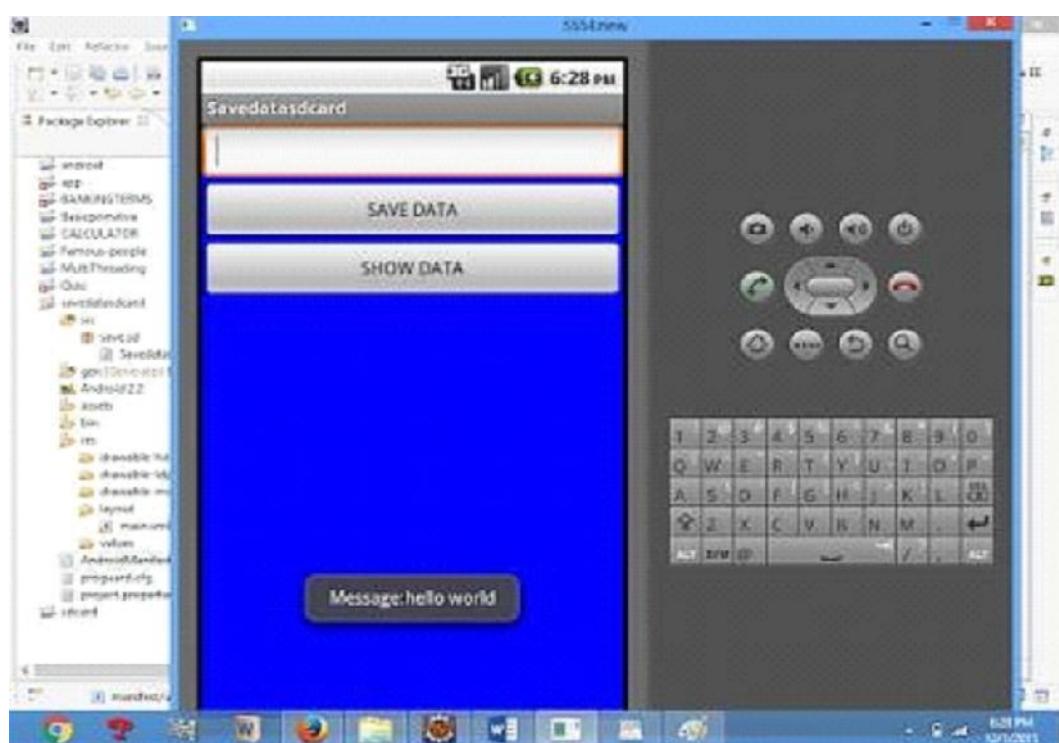

Toast.makeText(getApplicationContext(),"Message:"+final_data,Toast.LENGTH_LONG).show()
;

}catch(IOException e){
e.printStackTrace();
}
}
```

```
 } catch (FileNotFoundException e) {  
     e.printStackTrace();  
 }  
 }  
});  
}  
}
```

- 8) Next step is to set permission to write data in sd card. So go to AndroidManifest.xml file. Copy and paste the following coding. The code should come before <application> tab.

```
<uses-permission  
    android:name="android.permission.WRITE_EXTERNAL_STORAGE"></uses-permission>
```
 - 9) Now go to main.xml and right click .select run as option and select run configuration
 - 10) Android output is present in the android emulator as shown in below

Ex.No: 10**Date :**

**IMPLEMENT AN APPLICATION THAT CREATES AN ALERT
UPON RECEIVING A MESSAGE IN ANDROID**

- 1) Open eclipse or android studio and select new android project
- 2) Give project name and select next
- 3) Choose the android version. Choose the lowest android version(Android 2.2) and select next
- 4) Enter the package name. package name must be two word separated by comma and click finish
- 5) Go to package explorer in the left hand side. select our project.
- 6) Go to res folder and select layout. Double click the main.xml file. Add the code below

```
<ScrollView
    xmlns:android="http://schemas.android.com/apk/res/android"
    android:layout_width="fill_parent"
    android:layout_height="wrap_content"
    android:scrollbars="vertical" >

    <TableLayout
        android:layout_width="match_parent"
        android:layout_height="wrap_content"
        android:shrinkColumns="*"
        android:stretchColumns="*"
        android:background="#000000">

        <TableRow
            android:layout_height="wrap_content"
            android:layout_width="match_parent"
            android:gravity="center_horizontal">

            <TextView
                android:id="@+id>Title"
                android:layout_width="fill_parent"
                android:layout_height="wrap_content"
```

```
    android:layout_margin="5px"
    android:focusable="false"
    android:focusableInTouchMode="false"
    android:gravity="center_vertical|center_horizontal"
    android:text="QUIZ"
    android:textSize="25sp"
    android:textStyle="bold" />
<View
    android:layout_height="2px"
    android:layout_marginTop="5dip"
    android:layout_marginBottom="5dip"
    android:background="#DDFFDD"/>
</TableRow>
<TableRow
    android:layout_height="wrap_content"
    android:layout_width="match_parent"
    android:gravity="center_horizontal">
<TextView
    android:layout_width="match_parent"
    android:layout_height="wrap_content"
    android:textSize="18sp"
    android:text="1. CAPTIAL OF INDIA"
    android:layout_span="4"
    android:padding="18dip"
    android:textColor="#ffffff"/>
</TableRow><TableRow
    android:id="@+id/tableRow1"
    android:layout_height="wrap_content"
    android:layout_width="match_parent">
<RadioGroup
    android:id="@+id/answer1"
    android:layout_width="match_parent"
```

```
    android:layout_height="wrap_content"
    android:layout_weight="0.4" >
    <RadioButton
        android:id="@+id/answer1A"
        android:layout_width="match_parent"
        android:layout_height="wrap_content"
        android:textColor="#fffff"
        android:text="CHENNAI" />
    <RadioButton
        android:id="@+id/answer1B"
        android:layout_width="match_parent"
        android:layout_height="wrap_content"
        android:textColor="#fffff"
        android:text="NEW DELHI" />
    <RadioButton
        android:id="@+id/answer1C"
        android:layout_width="match_parent"
        android:layout_height="wrap_content"
        android:textColor="#fffff"
        android:text="MUMBAI" />
    <RadioButton
        android:id="@+id/answer1D"
        android:layout_width="match_parent"
        android:layout_height="wrap_content"
        android:textColor="#fffff"
        android:text="HYDERBAD" />
</RadioGroup>
</TableRow><TableRow
    android:layout_height="wrap_content"
    android:layout_width="match_parent"
    android:gravity="center_horizontal">
    <TextView
```

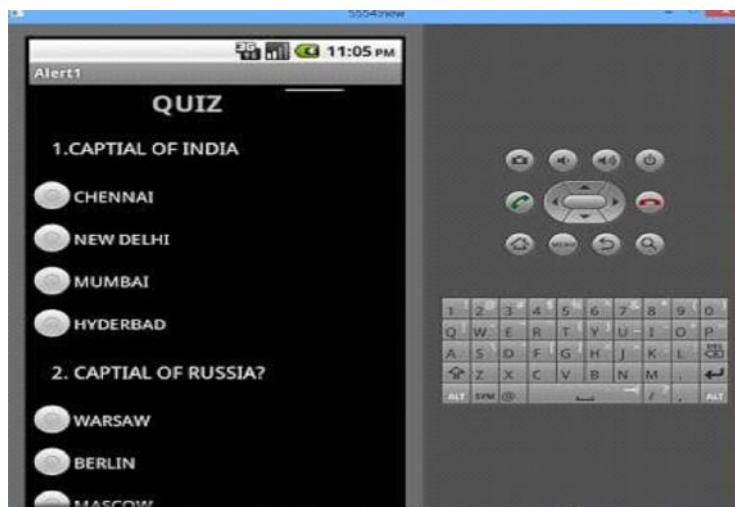

```
        android:layout_width="match_parent" android:layout_height="wrap_content"
        android:textSize="18sp"                               android:text="2. CAPTIAL OF
RUSSIA?" android:layout_span="4"
        android:padding="18dip"                            android:textColor="#fffff"/>
</TableRow>
<TableRow
    android:id="@+id/tableRow2"
    android:layout_height="wrap_content"
    android:layout_width="match_parent">
<RadioGroup
    android:id="@+id/answer2"
    android:layout_width="match_parent"
    android:layout_height="wrap_content"
    android:layout_weight="0.4" >
<RadioButton
    android:id="@+id/answer2A"
    android:layout_width="match_parent"
    android:layout_height="wrap_content"
    android:textColor="#fffff"
    android:text="WARSAW " />
<RadioButton
    android:id="@+id/answer2B"
    android:layout_width="match_parent"
    android:layout_height="wrap_content"
    android:textColor="#fffff"
    android:text="BERLIN" />
<RadioButton
    android:id="@+id/answer2C"
    android:layout_width="match_parent"
    android:layout_height="wrap_content"
    android:textColor="#fffff"
    android:text="MASCOW " />
```

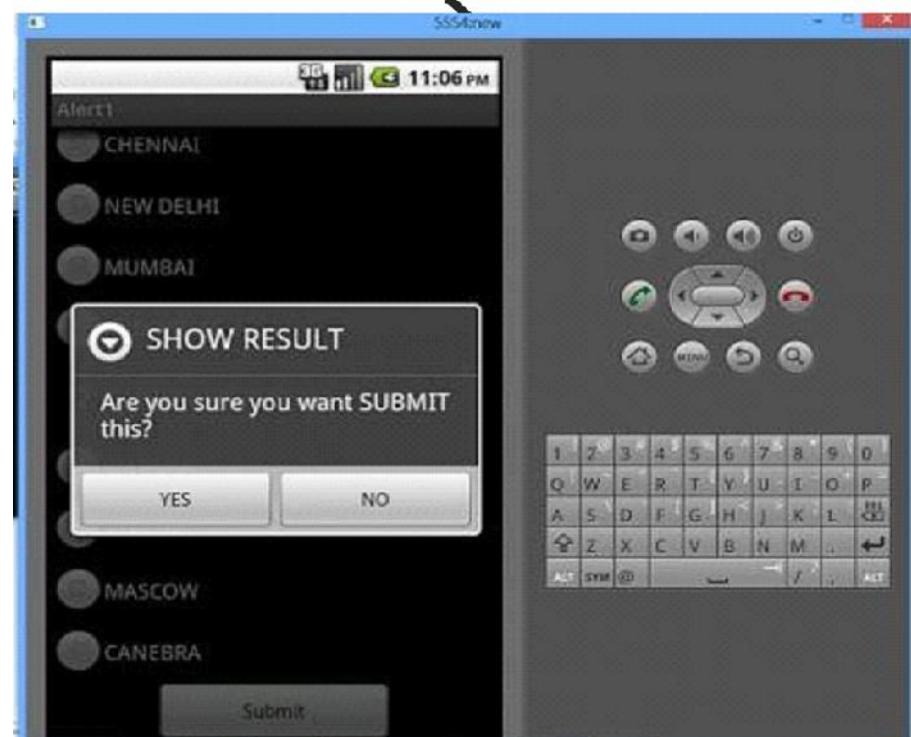

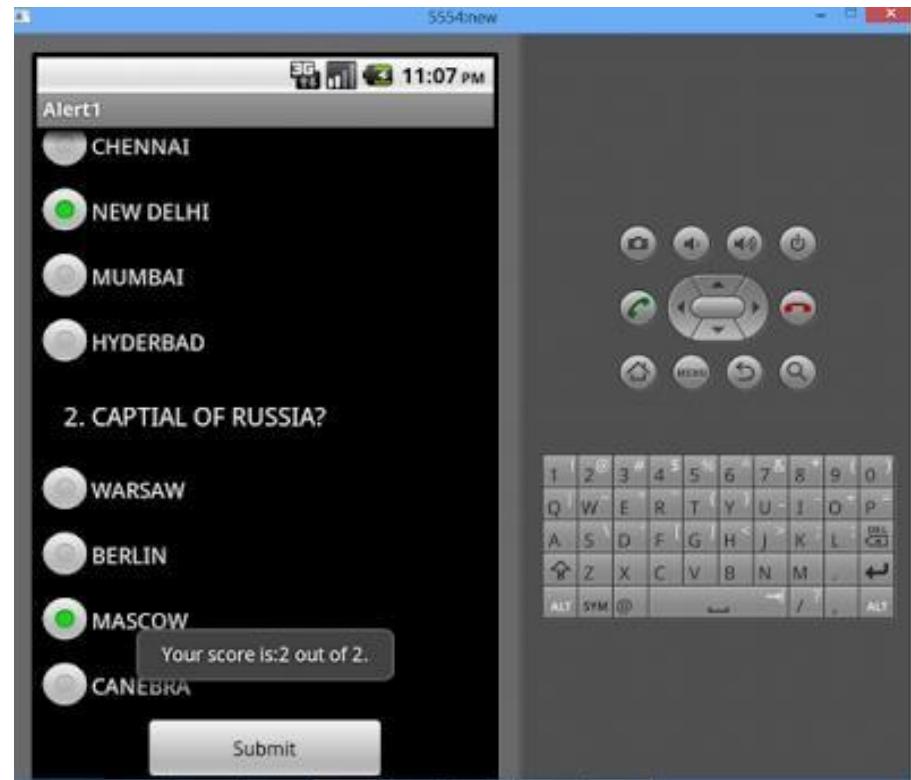

```

<RadioButton
    android:id="@+id/answer2D"
    android:layout_width="match_parent"
    android:layout_height="wrap_content"
    android:textColor="#fffff"
    android:text="CANE BRA" />
</RadioGroup>
</TableRow><TableRow
    android:layout_height="wrap_content"
    android:layout_width="match_parent"
    android:gravity="center_horizontal">
<Button
    android:id="@+id/submit"
    android:layout_width="wrap_content"
    android:layout_height="wrap_content"
    android:gravity="center"
    android:text="Submit" />
</TableRow>
</TableLayout></ScrollView>

```

- 7) Now select mainactivity.java file and type the following code. In my coding man activity name is Alert1Activity.
- 8) Now go to main.xml and right click .select run as option and select run configuration
- 9) Android output is present in the android emulator as shown in below.

Ex.No : 11**Date :**

WRITE A MOBILE APPLICATION THAT CREATES ALARM

CLOCK

1. Android Manifest**AndroidManifest.xml**

We need to give uses-permission for WAKE_LOCK, other than that the AndroidManifest.xml is pretty standard one. Just need to include the service and receiver.

```

<?xml version="1.0" encoding="utf-8"?>
<manifest xmlns:android="http://schemas.android.com/apk/res/android"
    package="com.javapapers.androidalarmclock">
    <uses-permission android:name="android.permission.WAKE_LOCK" />
    <application
        android:allowBackup="true"      android:icon="@drawable/ic_launcher"
        android:label="@string/app_name"    android:theme="@style/AppTheme">
        <activity
            android:name=".AlarmActivity"      android:label="@string/app_name">
            <intent-filter>
                <action android:name="android.intent.action.MAIN" />
                <category android:name="android.intent.category.LAUNCHER" />
            </intent-filter>
        </activity><service
            android:name=".AlarmService"      android:enabled="true" />
            <receiver android:name=".AlarmReceiver" />
        </application>
    </manifest>

```

2. Android Activity

activity_my.xml

The Android Activity is designed to be simple. We have a Time Picker component followed by a Toggle Button. That's it. Choose the time to set the alarm and toggle the switch to on. The alarm will work.

```
<RelativeLayout xmlns:android="http://schemas.android.com/apk/res/android"  
    xmlns:tools="http://schemas.android.com/tools"    android:layout_width="match_parent"  
    android:layout_height="match_parent"  
    android:paddingLeft="@dimen/activity_horizontal_margin"  
    android:paddingRight="@dimen/activity_horizontal_margin"  
    android:paddingTop="@dimen/activity_vertical_margin"  
    android:paddingBottom="@dimen/activity_vertical_margin"    tools:context=".MyActivity">  
    <TimePicker  
        android:layout_width="wrap_content"      android:layout_height="wrap_content"  
        android:id="@+id/alarmTimePicker"      android:layout_alignParentTop="true"  
        android:layout_centerHorizontal="true" />  
    <ToggleButton  
        android:layout_width="wrap_content"  
        android:layout_height="wrap_content"      android:text="Alarm  
On/Off"      android:id="@+id/alarmToggle"  
        android:layout_centerHorizontal="true"  
        android:layout_below="@+id/alarmTimePicker"  
        android:onClick="onToggleClicked" />  
    <TextView  
        android:layout_width="wrap_content"      android:layout_height="wrap_content"  
        android:textAppearance="?android:attr/textAppearanceLarge"  
        android:text=""      android:id="@+id/alarmText"  
        android:layout_alignParentBottom="true"  
        android:layout_centerHorizontal="true"  
        android:layout_marginTop="20dp"  
        android:layout_below="@+id/alarmToggle" />  
    </RelativeLayout>
```

AlarmActivity.java

Alarm Activity uses the Alarm Manager to set the alarm and send notification on alarm trigger.

```
package com.javapapers.androidalarmclock;
import android.app.Activity; import
android.app.AlarmManager; import
android.app.PendingIntent; import
android.content.Intent; import
android.os.Bundle; import
android.util.Log; import
android.view.View; import
android.widget.TextView; import
android.widget.TimePicker; import
android.widget.ToggleButton;
import java.util.Calendar; public
class AlarmActivity extends Activity
{
    AlarmManager alarmManager;    private
    PendingIntent pendingIntent;    private
    TimePicker alarmTimePicker;    private
    static AlarmActivity inst;    private TextView
    alarmTextView;
    public static AlarmActivity instance() {
        return inst;    }
    @Override
    public void onStart() {
        super.onStart();    inst =
        this;    }
    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);    setContentView(R.layout.activity_my);
```

```

alarmTimePicker = (TimePicker) findViewById(R.id.alarmTimePicker);      alarmTextView
= (TextView) findViewById(R.id.alarmText);
ToggleButton alarmToggle = (ToggleButton) findViewById(R.id.alarmToggle);
alarmManager = (AlarmManager) getSystemService(ALARM_SERVICE);
}

public void onToggleClicked(View view) {      if
(((ToggleButton) view).isChecked()) {
Log.d("MyActivity", "Alarm On");
Calendar calendar = Calendar.getInstance();
calendar.set(Calendar.HOUR_OF_DAY,
alarmTimePicker.getCurrentHour());
calendar.set(Calendar.MINUTE, alarmTimePicker.getCurrentMinute());
Intent myIntent = new Intent(AlarmActivity.this, AlarmReceiver.class);
PendingIntent pendingIntent = PendingIntent.getBroadcast(AlarmActivity.this, 0, myIntent, 0);
alarmManager.set(AlarmManager.RTC, calendar.getTimeInMillis(), pendingIntent);
} else {
alarmManager.cancel(pendingIntent);      setAlarmText("");
Log.d("MyActivity", "Alarm Off");
}  }
public void setAlarmText(String alarmText) {      alarmTextView.setText(alarmText);
}
}

```

3. Alarm Receiver

AlarmReceiver.java

this is the one that receives the alarm trigger on set time. From here we initiate different actions to notify the user as per our choice. I have given three type of notifications, first show a message to user in the activity UI, second play the alarm ringtone and third send an Android notification message. So this is the place to add enhancement for different types of user notifications.

```
package com.javapapers.androidalarmclock;
```

```
import android.app.Activity; import
android.content.ComponentName; import
android.content.Context; import
android.content.Intent; import
android.media.Ringtone; import
android.media.RingtoneManager; import
android.net.Uri;
import android.support.v4.content.WakefulBroadcastReceiver; public class
AlarmReceiver extends WakefulBroadcastReceiver {
@Override
public void onReceive(final Context context, Intent intent) {
//this will update the UI with message      AlarmActivity inst =
AlarmActivity.instance();      inst.setAlarmText("Alarm! Wake up!
Wake up!");
//this will sound the alarm tone
//this will sound the alarm once, if you wish to
//raise alarm in loop continuously then use MediaPlayer and setLooping(true)
Uri alarmUri =
RingtoneManager.getDefaultUri(RingtoneManager.TYPE_ALARM
);      if (alarmUri == null) {      alarmUri =
RingtoneManager.getDefaultUri(RingtoneManager.TYPE_NOTIFICATION);
}
Ringtone ringtone = RingtoneManager.getRingtone(context, alarmUri);      ringtone.play();
//this will send a notification message
ComponentName comp = new ComponentName(context.getPackageName(),
AlarmService.class.getName());
startWakefulService(context, (intent.setComponent(comp)));
setresultCode(Activity.RESULT_OK);
}
}
```

4. Alarm Notification Message

AlarmService.java

The receiver will start the following Intent Service to send a standard notification to the user.

```
package com.javapapers.androidalarmclock;  
import android.app.IntentService; import  
android.app.NotificationManager; import  
android.app.PendingIntent; import  
android.content.Context; import  
android.content.Intent;  
import android.support.v4.app.NotificationCompat; import  
android.util.Log;  
  
public class AlarmService extends IntentService {    private  
NotificationManager alarmNotificationManager;  
  
public AlarmService() {  
super("AlarmService");    }  
  
@Override  
public void onHandleIntent(Intent intent) {    sendNotification("Wake Up! Wake  
Up!");  
}  
  
private void sendNotification(String msg) {  
Log.d("AlarmService", "Preparing to send notification...: " + msg);  
alarmNotificationManager = (NotificationManager) this  
.getSystemService(Context.NOTIFICATION_SERVICE);  
  
PendingIntent contentIntent = PendingIntent.getActivity(this, 0,    new Intent(this,  
AlarmActivity.class), 0);  
  
NotificationCompat.Builder alamNotificationBuilder = new  
NotificationCompat.Builder(
```

```
this).setContentTitle("Alarm").setSmallIcon(R.drawable.ic_launcher)
.setStyle(new NotificationCompat.BigTextStyle().bigText(msg))
.setContentText(msg);

alamNotificationBuilder.setContentIntent(contentIntent);
alarmNotificationManager.notify(1, alamNotificationBuilder.build());
Log.d("AlarmService", "Notification sent.");
}
```
